

Download British Naval Policy In The Gladstone- disraeli Era, 1866-1880

Barbettes are several types of gun emplacement in terrestrial fortifications or on naval ships.. In recent naval usage, a 'barbette' is a protective circular armour support for a heavy gun turret. This evolved from earlier forms of gun protection that eventually led to the pre-dreadnought. The name ultimately comes from fortification, originally meaning a raised platform or mound, seen in the ...HMS Captain was an unsuccessful warship built for the Royal Navy due to public pressure. She was a masted turret ship, designed and built by a private contractor against the wishes of the Controller's department. The Captain was completed in April 1870 and capsized in September 1870 with the loss of nearly 500 lives because of design and construction errors that led to inadequate stability.
